This device is a specialized piece of equipment used in dental radiography. It is designed to provide precise and accurate X-ray images of the teeth and jaw. The large circular base allows for a wide range of motion, enabling the operator to position the X-ray tube and the patient's head at various angles. The vertical arm and control panel facilitate easy operation and adjustment of the X-ray beam. The device is built with high-quality materials to ensure durability and long-term performance.
