Figure 1. TrueNorth architecture.

Figure 1. TrueNorth architecture.

Figure 1. TrueNorth architecture.

Figure 1. TrueNorth architecture. The TrueNorth chip is a neuromorphic processor that is inspired by the structure and function of the human brain. It is a multi-chip system that consists of a large number of cores, each of which contains a large number of neurons and synapses. The cores are connected to each other in a hierarchical manner, allowing for efficient communication and processing. The chip is designed to be scalable, meaning that it can be used to build systems of varying sizes, from small embedded systems to large data centers. The TrueNorth architecture is based on the principles of neuroscience, and it is designed to mimic the way that the human brain processes information. This makes it a powerful tool for studying the brain and for developing new applications in artificial intelligence and robotics.
