1. Raspbian OS
 Raspbian OS is a Linux-based operating system for the Raspberry Pi. It is a fork of Debian Linux, which is a popular Linux distribution. Raspbian OS is designed to be easy to use and is suitable for both beginners and experienced users. It is available in two versions: Raspbian Stretch and Raspbian Bullseye. Raspbian Stretch is the current stable version, while Raspbian Bullseye is the next version in development. Raspbian OS is available for free download from the Raspberry Pi website. It is a great choice for anyone who wants to use their Raspberry Pi for a variety of projects, from simple home automation to more complex machine learning applications.

Raspbian OS 1.0 : Raspbian OS is a Linux-based operating system for the Raspberry Pi.

Arch Linux

Arch Linux is a Linux-based operating system for the Raspberry Pi. It is a lightweight and minimalist distribution that is designed to be easy to use and is suitable for both beginners and experienced users. Arch Linux is available for free download from the Arch Linux website. It is a great choice for anyone who wants to use their Raspberry Pi for a variety of projects, from simple home automation to more complex machine learning applications.
