- Google Camera app interface showing various features like Photo Sphere, HDR+, Lens Blur, Wide Angle, and Panorama. The app is designed to provide a professional camera experience on Android devices.
- Lens Blur: This feature allows users to create a bokeh effect in their photos, making the subject stand out from the background. It is available on Nexus 6 and Nexus 5.
- HDR+: This feature combines multiple exposures of the same scene to create a single image with a wider range of tones and colors. It is available on Nexus 6 and Nexus 5.
- Photo Stitching: This feature allows users to create a panoramic photo by stitching together multiple individual photos. It is available on Nexus 6 and Nexus 5.
- 360 Photo Sphere: This feature allows users to capture a full 360-degree panoramic photo, which can be viewed in a spherical format. It is available on Nexus 6 and Nexus 5.
- Camera: This is the standard camera mode, which allows users to take photos using the rear camera. It is available on Nexus 6 and Nexus 5.
- Video: This feature allows users to record videos using the rear camera. It is available on Nexus 6 and Nexus 5.
