Image Recovery (Free) - this mode allows you to recover digital images and videos (typically from memory cards and USB thumb drives) for free (using the demo version).

Data Recovery for Windows and Linux - use this mode to recover data from FAT, NTFS (Windows), ext 2/3/4, or XFS (Linux) file systems. Recover data from hard drives, disk image files, healthy RAIDs, existing partitions or missing partitions (using the "Scan for missing partitions" feature).

RAID Recovery - use this mode to reconstruct broken RAID 0, RAID 1+0, and RAID 5 arrays (RAID 5 array with one disk missing is no problem) and recover data from the array.
