1. **Frontend Development (Client-Side):** This involves creating the user interface and handling user interactions. It typically uses **HTML/CSS** for structure and styling, and **JavaScript** for dynamic behavior. Frameworks like **React**, **Vue.js**, and **Angular** are commonly used to simplify development and manage state.

Computer says NO to HTML5 document outline

June 9th, 2016 by Steve Faulkner.

What a brilliant idea! For the longest time HTML5 specified, and advised developers, that it no longer mattered what the number (1 to 6) was in a heading element (when used in conjunction with sectioning elements). What mattered was the nesting level of the H1-h6 in sectioning elements, just like the X<H>TML promised land, but [...]

| <h4>How Tabs Should Work</h4> <p>Benny Sharp picks that old chestnut - tabs - and roasts it afresh on the open fire of JavaScript to see how a fully navigable, accessible and clickable set of tabs can work. Everybody knows some scripting and some CSS can help to make your website bright. Although it's been said many times, many ways, please be careful to do it right.</p> <p>22 Dec 2015 16 comments</p> | <h4>Being Responsive to the Small Things</h4> <p>Jonathan Snook considers the problem of container (or element) queries in the context of responsive web design and looks at the approach taken by current open source JavaScript solutions. Remember, no matter what size of box your Christmas gift comes in, it's the thought that counts.</p> <p>29 Dec 2015 5 comments</p> | <h4>The Accessibility Mindset</h4> <p>Eric Eggert celebrates the simplicity of making websites accessible and, when accessibility is as fundamental to a project as performance and code quality, how it can improve the experience for all users. The web, like a gleeful cheer of "Merry Christmas" at yuletide, is for everyone.</p> <p>17 Dec 2015 2 comments</p> | <h4>Grid, Flexbox, Box Alignment: Our New System for Layout</h4> <p>Rachel Andrew unearths the new paradigms of web layout, comparing their features and showing how they can free us from grid-based, <code>display: inline-block</code> frameworks. Beautifully wrapped boxes look lovely under the Christmas tree, but we need to think and break out of them.</p> <p>15 Dec 2015 8 comments</p> |
| <h4>Be Fluid with Your Design Skills: Build Your Own Sites</h4> <p>Ross Hamer rings out a Christmas message for designers far and near of peace and goodwill to all, especially if they're developers. With a rallying cry to take back control to see your own designs realised, young or old, merry or sober, the story is clear: as you design, so should you build.</p> <p>12 Dec 2015 3 comments</p> | <h4>Upping Your Web Security Game</h4> <p>Guy Podjarny sounds a sober warning during our festivities, and gathers some winter fuel to help secure your apps and users from the web's occasionally cruel frost. So mark his footsteps good, my friend, and tread thou in them boldly. Thou shalt find the hacker's rage freeze thy site less coldly.</p> <p>11 Dec 2015 1 comment</p> | <h4>Putting My Patterns through Their Paces</h4> <p>Edun Marcotte dashes through the wintry landscape, his sled of Reviewed content drawn faithfully by a team of well-ordered hierarchical HTML hussies. For when it comes to structure and presentation, we must take care not to put the sleigh before the hounds.</p> <p>10 Dec 2015 7 comments</p> | <h4>Git Rebasing: An Elf in Workshop Workflow</h4> <p>Emma Jane Westby cracks open the door on Santa's workshop to investigate what lessons can be learned about git rebase from the elves (or subordinate clauses if you will). Take what you can from their workflow, but don't feed them too many mince pies; it's bad for their kit.</p> <p>7 Dec 2015 1 comment</p> |
