Receive SMS On PC

Android SMS messages can be received on a PC. This is a very useful feature for those who want to receive their messages on a larger screen. There are several ways to do this, but the most common is to use a software like AirDroid. This software allows you to connect your Android phone to your PC and receive your messages on the PC screen. This is a very convenient way to receive your messages, especially if you are working on your PC and need to check your messages frequently.

1. First, you need to install the AirDroid software on your PC. You can find it on the [AirDroid](https://www.airdroid.com/) website.

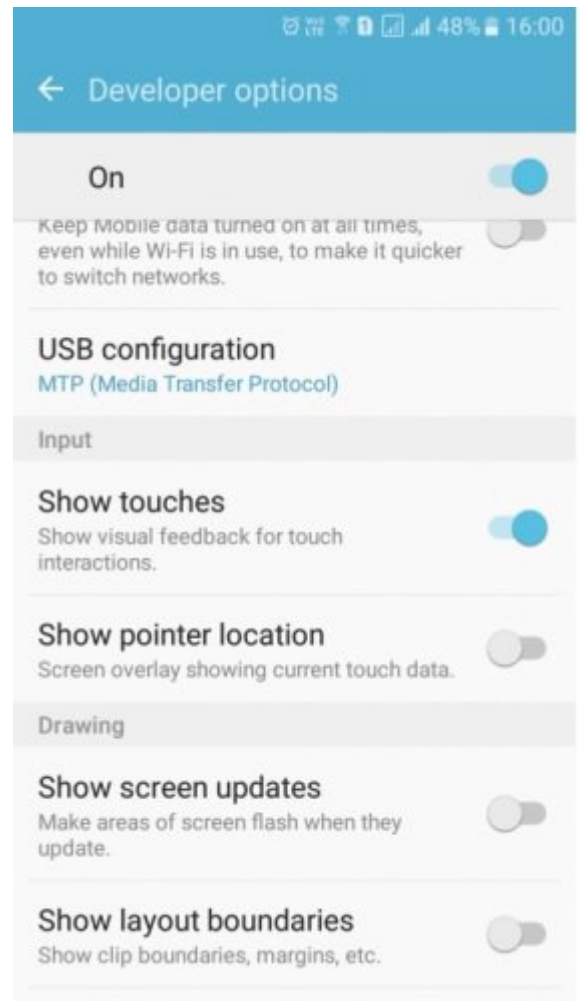

2. Then, you need to go to [Web.airdroid.com](https://web.airdroid.com/) and log in with your AirDroid account. If you don't have an account, you can create one. Once you are logged in, you will see a QR code that you need to scan with your Android phone.

3. After you scan the QR code, your Android phone will be connected to your PC. Now, you can receive your SMS messages on your PC screen. This is a very convenient way to receive your messages, especially if you are working on your PC and need to check your messages frequently.

There are other ways to receive SMS messages on a PC, but AirDroid is the most popular and easiest to use. It is a free software and you can use it on any PC. If you want to receive your SMS messages on a PC, I recommend you to use AirDroid.

Android 10.0.0 버전의 'Vision' 설정 페이지를 보여줍니다. 이 페이지에서는 시각 장애인 사용자가 화면을 더 쉽게 인식할 수 있도록 하는 다양한 옵션을 제공합니다. 예를 들어, 'High contrast fonts' (고대비 폰트)를 켜면 텍스트의 색상을 배경과 대비되게 조정하여 가독성을 높입니다. 'High contrast keyboard' (고대비 키보드)도 키의 크기와 색상을 조정하여 터치 정확도를 높여줍니다. 'Show button shapes' (버튼 모양 표시)는 버튼을 더 두껍고 선명하게 보여줍니다. 'Magnification gestures' (확대 제스처)는 화면을 확대하여 작은 텍스트나 버튼을 더 쉽게 볼 수 있게 합니다. 'Accessibility shortcut' (접근성 단축키)는 화면을 더 쉽게 탐색할 수 있는 단축키를 설정할 수 있습니다. 'Font size' (폰트 크기)는 텍스트 크기를 조정하여 가독성을 높입니다.

이러한 옵션들은 'Settings' (설정) > 'Accessibility' (접근성) > 'Vision' (시각)에서 설정할 수 있습니다. 각 옵션의 설명과 작동 방식을 더 자세히 알아보려면 해당 옵션을 클릭하여 자세한 정보를 보실 수 있습니다.
