

The image shows a laptop and a smartphone side-by-side. Both devices display the same Facebook chat interface, demonstrating a responsive design. On the laptop, the interface is wide, showing a list of contacts on the left and a chat window on the right. On the smartphone, the interface is narrow, with the contact list collapsed into a sidebar and the chat window taking up most of the screen. This visualizes how a single design can adapt to different screen sizes.
