

A night view of the San Francisco skyline from the Golden Gate Bridge. The bridge's suspension cables and lights are visible in the foreground, leading the eye towards the city. The skyline is filled with illuminated skyscrapers, including the Transamerica Pyramid. The water of the bay is dark, reflecting some of the city lights. The text "Announcing Build 2015" is overlaid in a large, white, sans-serif font. "Announcing" is in a smaller size and positioned above "Build 2015", which is the largest text on the slide.

Announcing

Windows Holographic is a technology that allows you to use your Windows 10 PC as a virtual reality (VR) headset. It uses the Windows Mixed Reality platform to create a virtual environment where you can interact with your PC's interface. This means you can use your PC's apps and files in a 3D space, making it feel like you're actually there. The technology is still in its early stages, but it has the potential to revolutionize how we use our computers. For example, you could use your PC to create a virtual office or a virtual classroom. You could also use it to create a virtual museum or a virtual travel agency. The possibilities are endless. However, there are some challenges that need to be overcome before Windows Holographic can become a mainstream technology. One of the main challenges is the cost of the hardware. Currently, the Windows Mixed Reality headset and the PC required to run it are quite expensive. Another challenge is the lack of content. There are not many apps or games available for Windows Holographic, which makes it less appealing to users. Finally, there is the issue of motion sickness. Some people experience motion sickness when using VR headsets, which can be a major barrier to adoption. Despite these challenges, Windows Holographic is a promising technology that has the potential to change the way we interact with our computers. As the technology improves and the cost of the hardware decreases, it could become a mainstream technology that is used by millions of people around the world.

Microsoft PowerPoint 2010 continuum

Microsoft PowerPoint 2010 is a software application for creating and presenting slides. It is part of the Microsoft Office suite. The interface includes a ribbon menu with various tabs for editing and presentation. The main area shows a slide with a desert landscape and a full moon. The left pane shows a list of slide thumbnails. The bottom taskbar shows the Windows Start button and other application icons.
