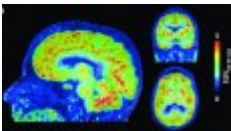

Figure 1. Brain scan image showing a cross-section of a brain with a color-coded area of interest.

[Figure 1. Brain scan image showing a cross-section of a brain with a color-coded area of interest.](#)

Figure 1. Brain scan image showing a cross-section of a brain with a color-coded area of interest. The image displays a sagittal view of a brain with a color-coded region of interest, likely representing a specific anatomical structure or functional area. The color scale on the right indicates the intensity of the signal, ranging from blue (low) to red (high).
