 reddit.com

 twitter.com

 facebook.com

Block sites permanently or by schedule. This feature allows you to block specific websites from your device. You can block sites permanently or for a set period of time. The blocked sites list shows the websites that are currently blocked. You can click on the site name to view details or to unblock the site. You can also click on the plus sign to add a new site to the blocked list.

Block Site. This feature allows you to block specific websites from your device. You can block sites permanently or for a set period of time. The blocked sites list shows the websites that are currently blocked. You can click on the site name to view details or to unblock the site. You can also click on the plus sign to add a new site to the blocked list.

hosts. This file contains a list of IP addresses and domain names. You can use this file to block access to specific websites. To block a site, you need to add its IP address to the hosts file. You can find the IP address of a website by using a search engine or a website lookup tool. Once you have the IP address, you can add it to the hosts file. This will prevent your device from connecting to the website.
