[illegible]

AdBlock, Google Docs, Google Docs Offline, Google Sheets, all of which are enabled. This is a good sign, as it means that the extensions are not being blocked or disabled by any security software or settings. The AdBlock extension is the most popular Chrome extension, with over 40 million users. It blocks ads all over the web. Google Docs, Google Docs Offline, and Google Sheets are all part of the Google Docs family of products. They allow you to create and edit documents and spreadsheets offline. The 'enabled' status of these extensions is a good indicator that they are not being blocked or disabled by any security software or settings.

How to check if your extensions are enabled

There are several ways to check if your extensions are enabled. The easiest way is to go to the 'chrome://extensions' page in your browser. This page will show you a list of all the extensions that are installed on your browser. Each extension will have a checkbox next to it. If the checkbox is checked, the extension is enabled. If the checkbox is unchecked, the extension is disabled. You can also check the status of your extensions in the 'Settings' app. Go to 'Settings' > 'Apps' > 'Extensions'. This will show you a list of all the extensions that are installed on your device. Each extension will have a status next to it. If the status is 'Enabled', the extension is enabled. If the status is 'Disabled', the extension is disabled.

Another way to check if your extensions are enabled is to look at the 'chrome://extensions' page in your browser. This page will show you a list of all the extensions that are installed on your browser. Each extension will have a status next to it. If the status is 'Enabled', the extension is enabled. If the status is 'Disabled', the extension is disabled. You can also check the status of your extensions in the 'Settings' app. Go to 'Settings' > 'Apps' > 'Extensions'. This will show you a list of all the extensions that are installed on your device. Each extension will have a status next to it. If the status is 'Enabled', the extension is enabled. If the status is 'Disabled', the extension is disabled.
