▼<p>
   "git is a distributed revision control and source code management (SCM) system with an emphasis on speed. git was designed by linus torvalds, of
   linux fame, for managing the development of the kernel. every git working directory is a fully fledged repository, complete with revision
   tracking abilities independent of a network or centralized server. git is 100% open-source, freeware, and distributed under the GNU general
   public license v2."
 </p>
