

End-to-end tests are the most expensive and time-consuming type of test. They require a complete system to be built and deployed, and they often involve a lot of infrastructure and data. Unit tests, on the other hand, are much cheaper and faster to run. They only require a small, isolated part of the system to be tested, and they can be run frequently throughout the development process.

The office environment is a key factor in productivity and employee satisfaction. A modern, open-plan office with high ceilings and large windows can create a bright and airy atmosphere that encourages collaboration and innovation. The use of multiple monitors and ergonomic chairs at each desk suggests a focus on providing a comfortable and efficient workspace for employees.
