SQL

SQL is a standard language for managing data in relational databases. It is used to create, modify, and retrieve data. SQL is a declarative language, meaning you tell the database what you want, not how to get it. SQL is used in many applications, including web applications, data analysis, and business intelligence.

Assembly

Assembly is a low-level programming language that is used to write code that runs on a specific hardware architecture. It is used to write code that is highly optimized for performance. Assembly is used in many applications, including operating systems, device drivers, and embedded systems. Assembly is a complex language to learn, but it is a powerful tool for writing high-performance code.

Assembly is a low-level programming language that is used to write code that runs on a specific hardware architecture. It is used to write code that is highly optimized for performance. Assembly is used in many applications, including operating systems, device drivers, and embedded systems.
